

There had to be a manual spring-roller operated screen in the Adeo range. An aluminium structure with a light and compact style: top quality standard, like that of the screen, VisionTex, made of coated cotton, with a 3 cm spray-painted black edge, designed for optimal planarity. A guarantee of excellence, also confirmed by the hard-wearing, adjustment-free, spring-operated mechanism. Its elegant design is not spoiled by bulky anchoring devices: the wall or ceiling mount brackets disappear behind the screen after the installation. Depending on the type of format, different applications can be obtained, along with the greatest flexibility: 4:3 and 1:1 for professional installations in small- to medium-sized rooms, for companies and school-rooms, and 16:9 for home entertainment and Home Cinema contexts.
