

SMS PROJECTOR PRECISION CM F

A secure position for heavy projectors.

Adjust the image simply and accurately with the aid of the ingenious joint, which can hold heavy projectors secure in the selected position. Fine adjustment, including tilt, is made directly at the projector bracket, without the need for any tools. This minimises the need for image adjustment using the projector, and gives significantly more rapid and easier installation. Cables are effectively concealed in the cable holder of the column. Delivered with a universal slide that can be used with most heavy projectors. A very stable solution that is also easy to service. Available in two lengths: one version of length 380 mm that can be cut down by as much as 170 mm, and a shorter version of length 110 mm, which cannot be cut to length. Maximum load: 20 kg. Finish: white.

QUESTIONS AND ANSWERS

What are the advantages of the SMS Precision CM F?

This is one of few products that can support heavy projectors stably, while offering extensive adjustment possibilities.

Will the bracket fit my ceiling height?

The bracket is available in two lengths, the longer one of which (380 mm) can be cut to length.
